UI Test Automation Case Study

Beginner Level

Case Study with CodeceptJS

This study consists of 3 scenarios which are described below. Test automation solution should be developed by using CodeceptJS. I recommend you to read through quickstart tutorial and gettind started before you start. Puppeteer driver must be chosen as described in the guide.

You may take this skeleton project of mine as an example and a starter.

Pushing the code to GitHub is a plus, while you are sending the project please add a description/readme about what you've achieved, what you've learned and what did you struggle the most.

Installations:
- node.js must be installed.
- Chrome Browser must be installed.
- Visual Studio Code is recommended as editor.

Scenarios
Login

1. Go to "automationpractice.com".
2. Click Sign In button.
3. Fill email and password fields.
4. Click Sign In button.
5. Assert that user logged in successfully

Search for an Item

1. Go to "automationpractice.com"
